

DESCRIPTION OF MAP SYMBOLS

----- Definitely active fault - Clear evidence of movement during the past 10,000 years; solid where location is known, dashed where approximately located, dotted where inferred.

----- Probably active fault - Evidence of probable movement during the past 10,000 years; solid where location is known, dashed where approximately located, dotted where inferred.

----- Possibly active fault - Evidence of movement during the past 500,000 years; solid where location is known, dashed where approximately located, dotted where inferred.

PERMAFROST

Perennially frozen ground is transitional from discontinuous to sporadic in this quadrangle.
